

1- Using document object method on the lecture's HTML page

- a- Find all images in page by two ways (document default collection and document methods).
- b- Find all options for City drop down list.
- c- Find all rows(tds) for second table in page.
- d- Find all elements that contain class name fontBlue and BGrey.

2- Display the date with time on the document title (**document.title**) which changed every second to show time with date. Note: use **.toLocaleString()** method of the Date Object.

3- write function **startSliding(imgObject)** which takes the image Object to be slide on the page , and start changing the image every second

don't make timer ID global return it from sliding function. then write another function that stop image sliding **stopSliding(timerID)** which stop sliding the image by taking the timerID as an input.

Now call this function on console to control image sliding on the page for any image.

Bonus(Optional):

Using location Object with simple HTML Form Page

Name :

Age :

With get method, after clicking submit button show the Name and Age on page console.
