

JavaScript Lab7

Your assignment contains 3 files: carmodule.js , flyingcarmodule.js and base module.js

a- car.js module

contains Car class with the following properties:

a- Model (example : "pmw","picanto" and so on)

b- Year

c- toString Function that's print car's data(model,year)

Export the class

b- FlyCar.js module

contains FlyingCar class that inherits from car and has property canFly(TRUE)

FlyigCar Class has toString Function that return the call of parent function and "I can Fly"

Export the class

c- Base.js module

Create an object from FlyinCar then prints the object value as a string on console.
